SELECTED WORK

Ian Malone

Product designer who ships working product — design in Figma, build in React Native, from user flows to production code.

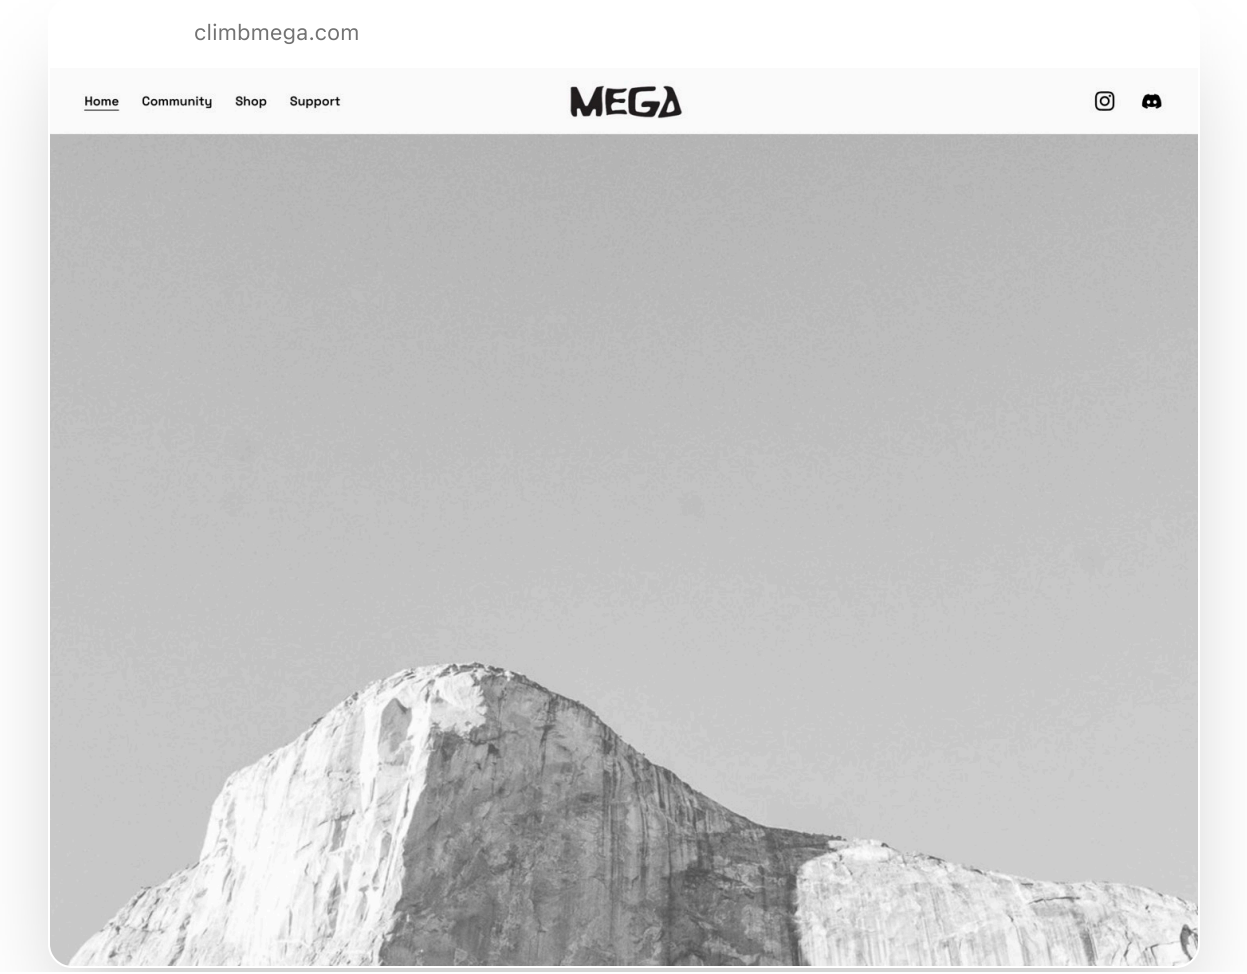

PRODUCT · APP & BRAND

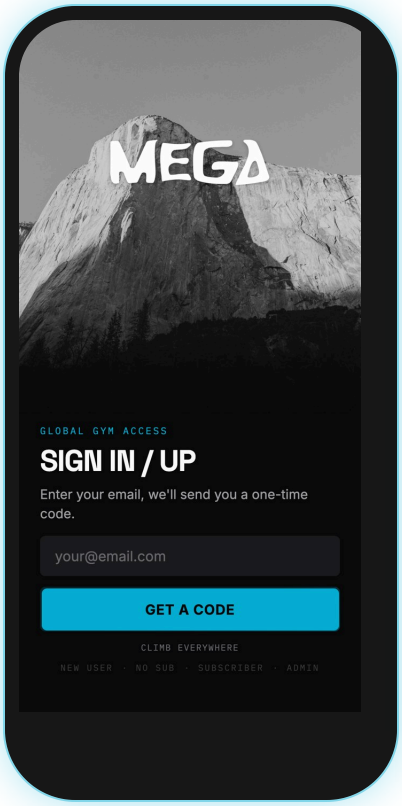

Mega

A mobile app for climbers, designed and built end to end — user flows, UI, and a reusable component set, shipped in React Native / Expo on a Postgres-on-Railway backend seeded with hundreds of climbing gyms. Brand and marketing site designed alongside it.

EDITORIAL · PRINT & BRAND

The Dirtbag Rag — Issue 01

A 90-page independent print magazine: photography, editorial type, and layout across motorcycle culture, climbing, food, and music — including the founding feature on Mega. Designed in Adobe InDesign.

Issue 01

The Dirtbags Rag

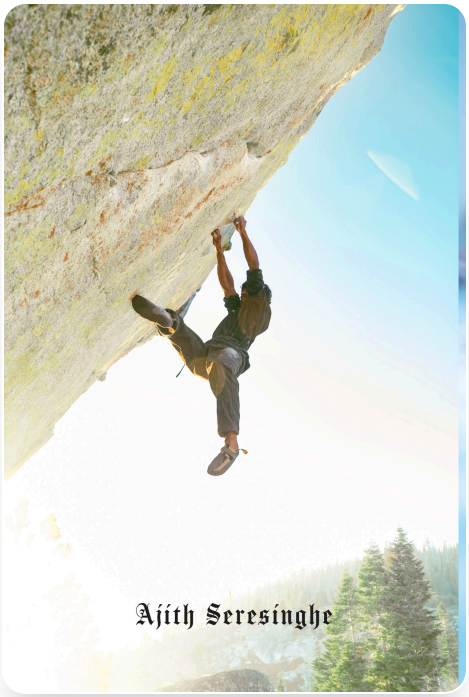

An outlet for all art, in any shape or form. If one feels moved to share their vision with the world, they deserve a place where their voice can be seen. That's what The Rag is for. We are a media outlet rooted in creativity without pretense, a zine shaped by the people and anyone carrying a story within them.

Expression doesn't need a label. It only needs intention. Everyone has a space in the Rag, Everyone holds a perspective worth hearing. Our purpose is simple: to offer a platform where raw vision is recognized, truth and passion rise above polish, and the act of sharing becomes a form of connection.

To those who take the time to read, your attention is a gift. You give life to the work shared here, and your presence helps shape what this magazine can become.

There is much ahead, and much we are eager to build. The Rag is only at the beginning of its story, and we're grateful to have you with us as we grow.
